Addis Ababa, Ethiopia

Professional Summary

Passionate Full-Stack Software Engineer with experience building scalable, user-focused web applications using React, TypeScript, Django, and PostgreSQL. Skilled in developing responsive frontends, designing robust APIs, and delivering production-ready solutions across real-world projects and collaborations. Strong focus on performance, maintainability, and clean architecture, with a focus on UI/UX design and system design.

Skills

- **Frontend:** React.js, Redux, TypeScript, NextJs Tailwind CSS, Styled Components, Component-driven architecture
- **Backend:** Django, Django REST Framework, PostgreSQL, API development, Authentication (JWT, Djoser)
- **Tools & Platforms:** Git, GitHub, Postman, Docker, Figma, Trello, Linux, Jira
- **Soft Skills:** Problem-solving, teamwork, remote collaboration, time management, attention to detail

Experience

Full-Stack Software Engineer

- Swenetix (formerly Addis Software) (present) · Addis Ababa (Hybrid)
- Contributing to the development of scalable software solutions across multiple products, including an electric mobility platform
- Working on both frontend and backend systems to deliver reliable, user-focused applications
- Collaborating with cross-functional teams to design, build, and maintain core product features
- Integrating APIs and services to support real-time system interactions and data flow
- Enhancing code quality, performance, and maintainability through refactoring and best practices
- Participating in code reviews and continuous improvement of development processes

Full-Stack Software Engineer

- Seamless Technology · Addis Ababa (Hybrid)
- Worked on large-scale health and data platforms used by public-sector stakeholders
- Refactored frontend and backend modules in OpenIMIS, improving maintainability and reducing technical debt
- Collaborated with backend teams to align API contracts with frontend data needs
- Contributed to UI consistency, data presentation, and validation workflows in the NHDD platform
- Participated in code reviews and iterative improvements following engineering best practices

Frontend Developer and UI/UX Designer

- Kuraz Tech · Addis Ababa (Hybrid)
- Contributed to a complete Restaurant Management System using React, Redux, and Tailwind CSS
- Built reusable components and responsive UIs, improving maintainability and load speed
- Awarded Best UI/UX Design and nominated Best Frontend Developer

Backend Developer

- Ewenet Communication PLC Addis Ababa (Hybrid)
- Built and tested Django REST APIs for service-based applications
- Implemented JWT-based authentication and PostgreSQL optimization
- Assisted in admin dashboard functionalities and secure API integrations

Software Developer Intern

- Tria PLC · Addis Ababa (On-site)
- Participated in the Quality Assurance team for Learning Management System (LMS) project
- Conducted manual and exploratory testing to ensure feature stability and usability
- Helped identify bugs and collaborated with developers to resolve issues

Projects

Dodai E-Mobility Platform

- **Frontend-Heavy Fullstack Developpe**
- Multi-platform e-mobility ecosystem consisting of an admin dashboard and three operational applications for drivers, swappers, and distributors using React, React Native, TypeScript, Redux, and REST APIs
- *Description* – Worked on scalable frontend systems, operational dashboards, mobile application workflows, API integrations, and multi-role platform experiences. Contributed to feature development, frontend architecture, state management, and responsive production-level interfaces supporting real-time operational workflows

National Health Data Dictionary (NHDD)

- **Backend Developer**
- Governmental healthcare data management platform built with Django, Django REST Framework, PostgreSQL, and session-based authentication
- *Description* – Worked as the Backend Developer responsible for designing backend architecture, developing scalable REST APIs, implementing business workflows, and optimizing system performance based on data access and creation patterns. Contributed to building reliable and maintainable workflow-driven healthcare data operations for large-scale national usage

Community-Based Health Insurance (CBHI)

- **Fullstack Developer**
- Healthcare insurance management platform customized from OpenIMIS using React, TypeScript, Django, and PostgreSQL
- *Description* – Worked on frontend and backend development, feature customization, workflow improvements, and scalable system enhancements for healthcare insurance operations. Contributed to modernizing workflows, improving maintainability, and developing production-ready operational features

AddisBooking web app

- **Fullstack Developer**
- AddisBooking is a comprehensive booking platform built with React, Tailwind CSS, Redux for state management, and Django at the backend.
- *Description* – The system enables service providers to create profiles, list services, manage availability calendars, and receive bookings from customers. It streamlines appointment scheduling, payments, and notifications, offering a seamless experience for both providers and clients.

Education

B.Sc in Software Engineering - Bahirdar University - CGP-3.51
